- Available in different colours and finishes
- Suitable for a wide variety of private and public environments
- Qualified for contract use

J110 CHAIR

DESIGN BY POUL M. VOLTHER

With the comfort of a lounge chair and the functionality of a dining chair, HAY's reproduction of Poul M. Volther's J110 Chair offers equal measures of strong aesthetics and practicality. Long rods at the back and curved armrests create an inviting expression. Crafted in solid oak or beech and available in a variety of oiled, natural or coloured finishes.

Poul M. Volther was a Danish designer and educator (at Denmark's Design School) who was responsible for a number of notable mid-century furniture designs, including chairs, armchairs and sofas. Trained as a cabinet maker and furniture designer at The Arts and Crafts School in Copenhagen, he was a key proponent of functionalism and specifically focused on applying craft techniques to fine quality materials. He was employed as a designer at FDB in 1949 and later went on to become the head of design. FDB (Fællesforeningen for Danmarks Brugsforeninger) is the Danish Consumers Cooperative Society, more widely known as Coop. The FDB furniture department played a pivotal role in revolutionising the industry in Denmark, it was founded in 1933 and in 1942 Børge Mogensen was installed as design director. His pioneering approach was distinguished by a desire to create simple, elegant and practical design intended for mass consumption. During his time at FDB, Volther designed a number of products, those now produced by HAY are the three-legged J107 chair and his interpretation of the Windsor chair, the J110.

SUSTAINABILITY

HAY focuses on developing long-lasting products that minimise the environmental impact throughout their lifecycle. We prioritise carefully selecting materials, such as recycled content, FSC™-certified wood, and water-based lacquer, while continuously increasing the number of eco-certified products. We adhere to strict regulatory requirements, and the majority of our products are tested to meet international standards for strength, durability, and safety.
