

Prismatic Table

Isamu Noguchi, 1957

Following a purely geometric design, the Prismatic Table takes inspiration from traditional Japanese paper folding techniques. The side table comprises three elements made of folded sheet aluminium with a high-quality powder-coated finish. Joined together they form a three-legged table with a hexagonal top.

As originally planned by Isamu Noguchi, Vitra produces the Prismatic Table in three versions, whose three individual parts are each available in different combinations of muted shades of grey. Arranging several of these Prismatic Tables together reveals captivating kaleidoscope-like patterns.
